

RSC GROUP

Building the Next Generation of Digital Platforms

Corporate presentation document

What RSC Group is, how its ecosystem works, and what each component does — prepared for investors, strategic partners, companies, and institutions.

Document type	Corporate overview / Investment briefing

01 Executive summary

RSC Group is a multi-product technology company that builds digital platforms for real estate, digital finance, secure transactions, and decentralized infrastructure. It is not a single product: it is an integrated stack under one corporate brand and shared infrastructure (RSC Chain).

The core thesis is simple: one company, multiple platforms. Each product works independently and becomes stronger when connected to the rest of the ecosystem — wallet, payments, escrow, P2P, real estate, and corporate services share rails, identity, and settlement.

Business pillars

Pillar	Description	Key benefit
Reeskova	Digital real-estate marketplace with AI, verified listings, and escrow-ready flows	Entry into real estate and capital
RSC Chain	Enterprise blockchain infrastructure (high TPS, fast finality, compliance)	Shared settlement rails
Digital finance	Wallet, QR payments, remittances, staking, mining	Retail adoption and engagement
Markets & trust	Institutional P2P + digital Escrow	Secure B2B/B2C settlement
Enterprise	RSC Corporate: consulting, private networks, ERP/CRM integrations	B2B / institutional revenue
REESK (RSK) token	Native utility: fees, staking, governance, participation	Economic alignment of the ecosystem

Platform signals (design targets)

Metric	Target	Meaning
Throughput	10,000+ TPS (target)	Capacity for institutional load
Confirmation	< 2 seconds (target)	Payments and settlement UX
Availability	99.9% – 99.99%	Continuous operation
Custody model	Non-custodial	Users control their keys
Product coverage	10+ products / modules	Multi-product portfolio

Note: performance figures represent design targets and platform capacity communicated in product documentation; they should be validated in the context of each deployment and technical due diligence.

02 What is RSC Group

RSC Group is the parent technology brand behind a portfolio of digital platforms. Its proposition is not limited to “another wallet” or “another chain”: it organizes vertical products (real estate, payments, P2P trading, escrow) on a horizontal layer of infrastructure, security, APIs, and data.

Positioning

Tagline: Building the Next Generation of Digital Platforms.

Manifesto: We don't build apps. We build digital ecosystems.

Brand color: Navy #081A33 — institutional sobriety, not crypto-hype aesthetics.

Problems it solves

- Fragmented digital finance: wallet, payments, remittances, and staking live in silos.
- Cross-border and remittance friction: intermediaries, opaque costs, and delays.
- Institutional need for rails: P2P, escrow, compliance, and private networks.
- Digital real estate: discovery, trust, verified listings, and secure settlement.
- Network participation: mining, referrals, staking, and native-token utility.

Group brands

Brand	Role
RSC Group	Parent company / corporate brand (rscgroup.com)
Reeskova	Flagship digital real-estate product
RSC Chain	Blockchain infrastructure and crypto brand (rscchain.com)
REESK / RSK / wRSK	Native token (and BSC sale representation when applicable)
RSC Wallet / RSC Mining	Consumer products for assets and network participation

03 Vision, mission, and philosophy

Vision

To create a decentralized financial ecosystem that empowers individuals and institutions worldwide, making financial services accessible, transparent, and secure for everyone.

Mission

To build and maintain RSC Chain infrastructure, delivering innovative blockchain solutions that enable secure, fast, and cost-effective financial transactions while fostering financial inclusion and enabling next-generation digital platforms (including real estate with Reeskova).

Philosophy

Principle	What it means in practice
Decentralization	More transparent, fair, and resilient systems; fewer single points of failure.
Security first	Protection of funds and data above feature velocity.
Open innovation	Developers, companies, and institutions can build and integrate together.

Leadership values

- Innovation — products with real technological ambition.
- Integrity — clear communication with users, partners, and investors.
- Technology — blockchain is one layer; the stack includes AI, cloud, analytics, and APIs.
- Trust — escrow, verification, and non-custodial as design, not marketing.
- Execution — sequenced roadmap: flagship products → global expansion.

04 Ecosystem map

RSC Group sits at the center. Products expand in orbit and reconnect through shared infrastructure (chain, APIs, security, identity).

Component	Category	Primary function
Reeskova	Real Estate	Marketplace: buy, sell, rent, invest
RSC Chain	Infrastructure	Enterprise blockchain, settlement, consensus
RSC Wallet	Consumer Finance	Non-custodial assets, send/receive, QR, staking
Payments & QR	Payments	Everyday pay/collect flows with clear status
Remittances	Payments	Cross-border P2P transfers
Business Wallet / API	B2B	Collections, roles, reporting, POS/e-commerce integration
RSC P2P	Markets	Institutional peer-to-peer trading / marketplace
RSC Escrow	Trust	Conditional custody until conditions are met
RSC Corporate	Enterprise	Consulting, private networks, 24/7 support
REESK (RSK)	Tokenomics	Fees, staking, governance, network utility
Mining & Rewards	Participation	Mobile participation, referrals, events
Developer Platform	Builders	Docs, APIs/SDKs, testnet, faucet, roadmap

How everything connects

The wallet is the consumer gateway. RSC Chain coordinates identity, payments, utilities, and the roadmap toward bridge and bank-grade payment experiences. Reeskova delivers the real-estate vertical and leans on group capabilities (AI, analytics, escrow-ready, blockchain-ready). P2P and Escrow provide trust rails for institutions and high-value operations. Corporate closes the enterprise loop with private networks and integrations.

Cross-cutting technology layers: Blockchain · Artificial Intelligence · Cloud · Security · Data Analytics · APIs · Open platform.

05 **Reeskova — Real Estate**

The future of real estate

Reeskova is RSC Group's flagship real-estate marketplace. It enables buying, selling, renting, and investing through a premium digital marketplace designed for the next generation of properties and capital. It is not a static classifieds board: it runs on group technology (AI, big data, cloud, analytics, escrow-ready, and blockchain-ready).

Value proposition

- AI Search — find properties based on lifestyle and investment intent.
- Verified Listings — featured inventory reviewed so buyers can move with confidence.
- Secure Transactions — safer negotiations and escrow-ready flows.
- Smart Investment — signals and analytics without noise to evaluate opportunity.
- Interactive map — premium geographic discovery with filters (buy / rent / invest).

User journey

Step	Action	Outcome
1. Search	AI-assisted filters + live map	Relevant shortlist
2. Visit	Schedule visits with trusted professionals	Physical validation
3. Negotiate	Conversations and proposals in a premium flow	Structured offer
4. Secure Deal	Safer transactional infrastructure	Close with confidence
5. Move In	Close with clarity	Next chapter / asset

Audiences

- Buyers — explore, compare, and contact with a modern product experience.
- Agents — qualified leads, premium listing storytelling, CRM alignment.
- Developers — launch spotlights, rich media, and sales pipeline.
- Investors — ROI, yield, and growth framing with institutional sobriety.

Reeskova strengthens the RSC Group parent brand without distracting home seekers, and leaves room for the next ecosystem product (P2P, Escrow, future financial solutions).

06 RSC Chain — Blockchain infrastructure

Enterprise blockchain infrastructure

RSC Chain is high-performance blockchain infrastructure designed for institutional use. It combines enterprise-grade security, scalability, and compliance features to enable financial and settlement applications at scale.

Core characteristics

- High performance — optimized for high throughput and low latency.
- Enterprise security — multi-layer architecture and institutional key management.
- Regulatory compliance — KYC/AML orientation and reporting capabilities.
- Fast finality — confirmation with deterministic finality for settlement.
- Byzantine fault tolerance — resilience against failures and malicious actors.

Layered architecture

Layer	Responsibility
Consensus	Network security and transaction finality
Execution	High-performance environment for contracts and complex transactions
Application	APIs and tools for builders and institutions

Institutional use cases

- CBDC / central bank digital currencies — compliance, throughput, auditability.
- Cross-border payments — fast settlement, lower costs, 24/7 availability.
- Digital asset infrastructure — tokenization, institutional DeFi, smart contracts.

Technical documentation (GitBook)

RSC Chain documentation covers, among other modules: architecture, integrated AI, security (including post-quantum cryptography and ZKP in the technical narrative), hybrid consensus (PoW/PoS/VRF), P2P networking (Kademlia, Gossip, QUIC/Noise), storage, REST/WebSocket APIs, monitoring, and sector use cases (DeFi, gaming, healthcare, supply chain, government).

For investors: RSC Chain is the horizontal layer that monetizes and scales the rest of the portfolio — without it, wallet, payments, P2P, and escrow would be isolated products.

RSC Wallet

Non-custodial wallet to operate on RSC Chain

The consumer gateway into the ecosystem. Manage assets, execute transactions, participate in staking, and access DeFi utilities from one surface. Non-custodial model: your keys, your control.

- Send / receive RSK and compatible assets with Pending / Confirmed status.
- Balance, portfolio, and transparent exportable history.
- QR payments (ideal for commerce and daily life).
- Staking integrated into the product flow.
- Security: seed phrase, PIN, biometrics, auto-lock.

QR Payments (RSC Payments)

A fast, decentralized payment system on RSC Chain. Scan or generate a QR code, confirm, and send — without unnecessary intermediaries and with fees visible before confirmation.

- Use cases: pay friends, merchants, cafés, online stores.
- Real-time P2P transfers between RSC users.
- Full history and on-chain confirmation.

Remittances / Transfers

Send value globally with speed and control. Ideal for family transfers, freelancers, and recurring payments. Costs visible before confirmation; instant receipt between RSC Wallet users.

Education / Learn

Onboarding guides: what a wallet is, non-custodial vs custodial, seed-phrase protection, first steps, and FAQ. Reduces adoption friction for new users.

Payments and finance infrastructure for modern businesses: more than a consumer wallet.

RSC Business Wallet

Business wallet with controls and reporting

Built for teams: multi-user access, roles, limits, approvals, and reporting.

- Roles: Admin, Manager, Operator — granular permissions.
- Daily/weekly/monthly payment limits.
- Multi-approval operational flows for sensitive amounts.
- History and reports oriented to reconciliation.

RSC Payments (merchant)

- QR collections with fast settlement.
- Clear confirmation states for POS and back-office.
- Integration with e-commerce, apps, and POS / TPV.

Payments API

Interfaces to integrate collections into proprietary apps, marketplaces, and points of sale. Designed for product developers and integration partners, with security and documentation aligned to the ecosystem stack.

Billing / Reports

Billing tools and financial reports for commercial operations on RSC rails — traceability and export for accounting.

Commercial use cases

- Retail and physical commerce with QR.
- Digital platforms and e-commerce.
- Business remittances and supplier payments.
- Marketplaces that need fast, auditable settlement.

RSC P2P*Peer-to-peer marketplace / institutional rails*

Sophisticated peer-to-peer trading infrastructure for financial institutions, funds, and brokers. Focused on liquidity, market clarity, and secure settlement.

- High-volume trading with advanced matching.
- Market infrastructure: pricing, order book, execution.
- Compliance orientation (KYC/AML) in the institutional narrative.
- Use cases: institutional OTC, conversion, counterparty liquidity.

RSC Escrow*Secure digital transactions*

Rails that hold value until all parties meet conditions — built for trust, automation, and high-ticket operations (including real estate when Reeskova runs escrow-ready flows).

- Conditional custody of value until contractual milestones.
- Reduced counterparty risk in P2P and offline deals.
- Natural complement to Reeskova and the P2P market.
- Foundation for dispute resolution and auditable processes.

For investors: P2P + Escrow are engines of volume and trust. They monetize market infrastructure and reduce friction in operations that today depend on expensive or slow intermediaries.

10 RSC Corporate

Enterprise solutions and services

RSC Corporate delivers enterprise blockchain services and solutions for large institutions that need control, privacy, and end-to-end support.

Service lines

Line	Deliverables
Blockchain consulting	Strategy, roadmap, security assessment, implementation guidance
Dedicated infrastructure	Private networks, custom configuration, managed services 24/7
Private integrations	ERP/CRM, real-time sync, custom apps and smart contracts
Enterprise support	24/7 support, account manager, priority SLA, training

This arm converts group technology into recurring B2B revenue (managed services, integration projects, and private networks), complementing consumer adoption of wallet/mining.

11 REESK (RSK) — Native token

REESK (ticker RSK) is the native token of RSC Chain. Its role is to align incentives among users, validators/network participants, builders, and institutions.

Utility

- Network fees — payment of commissions in the ecosystem.
- Staking — lock tokens to support the network and earn rewards (APY communicated up to ~5% annually per product rules; illustrative minimum lock 30 days / unstake 7 days).
- Governance / participation — voice in ecosystem evolution where applicable.
- Access to utilities — mining rewards, events, and stack services.

Sale / liquidity (wRSK)

There is a public sale narrative and product for wRSK on BSC (buy with USDT via MetaMask), with a communicated vesting scheme (e.g., 25% immediate and 75% over 6 months). wRSK acts as a liquidity representation/bridge toward the REESK ecosystem. Exact smart-contract terms, supply, and vesting must be verified in the on-chain and legal documentation in force at the time of any investment.

Disclaimer: this document is informational and does not constitute an offer of securities, investment advice, or solicitation. Any participation in tokens involves risk of capital loss.

12 Mining, staking, and rewards

Network participation

In addition to in-product staking, RSC Group operates a participation and rewards layer that includes mobile mining (official Google Play app: RSC Mining), web dashboard, pools, earnings, referrals, and temporary events (e.g., Snow Mining / Christmas campaigns).

- Mining sessions (e.g., 24h windows) with earnings metrics.
- Referral program (communicated order of magnitude ~10% depending on implementation).
- Events with rarity / engagement mechanics for community growth.
- Integration with wallet and ecosystem utilities.

Why it matters for the business

Mining and rewards are acquisition and retention engines. They feed the consumer base that later uses wallet and payments and — at scale — demands liquidity and P2P/escrow services. For investors, this is the retail adoption funnel of the ecosystem.

13 Developer platform

RSC Group opens the infrastructure to builders: documentation, APIs/SDKs, testnet/faucet, and a public technical roadmap.

- Developer Docs — guides, RPC, nodes, REST/WebSocket patterns.
- APIs & SDKs — wallet, payments, smart contracts / app integration.
- Testnet / Faucet — test environment without mainnet risk.
- Technical roadmap — transparency on network and product evolution.
- GitHub (rscchain) — open surface / collaboration.

An open platform multiplies chain value: third parties build dApps, commercial integrations, and vertical tools on the same rails.

14 Security and compliance

Security is part of the product, not a banner. The non-custodial model places key control with the user; the platform provides protection layers and best practices.

Security layers (consumer products)

- Non-custodial — RSC does not custody user funds.
- Seed-phrase backup — responsible offline recovery.
- PIN / biometrics / auto-lock — device protection.
- Anti-phishing reminders and address verification.
- Transactions with visible costs and clear status.

Institutional orientation

- Multi-layer security architecture on RSC Chain.
- KYC/AML compliance narrative in institutional markets.
- Private networks and managed infrastructure via RSC Corporate.
- Additional technical documentation: post-quantum, ZKP, L7 firewall, behavioral analysis (GitBook).

Final security also depends on the user's care with their seed phrase and device. In enterprise contexts, shared responsibilities (client ↔ RSC) are defined by the service agreement.

15 Technology architecture

Simplified stack view for technical and product due diligence:

Layer	Components	Notes
Brand / Corporate web	RSC Group site (React/Vite), i18n EN/ES	Investor and customer narrative
Consumer web	rsc-web: wallet, mining, staking, P2P, explorer	User experience + campaigns
Mobile	RSC Mining app (Android / Play Store)	Acquisition and engagement
Platform backend	APIs, Supabase/Postgres, mining sessions, referrals	Persistence and ops
Chain API	RSC Chain API (cloud infra)	Settlement and network operations
Token sale	wRSK frontend + BSC contracts / MetaMask	Liquidity and distribution
Admin / Mission Control	Ops panels, GraphQL, RBAC, treasury/campaigns	Internal operations
Support	AI chatbot + human escalation	User support

Cross-cutting group capabilities

- Blockchain — secure, verifiable settlement.
- AI — matching (Reeskova), automation, support, and anomaly detection (chain).
- Cloud — global availability and scale.
- Security — defense in depth for identity and transactions.
- Data Analytics — insight on markets, assets, and operations.
- APIs — composition for partners and institutions.

Audiences and use cases

Audience	What they get	Key products
Individuals	Everyday digital money with key control	Wallet, QR, remittances, staking, mining, Learn
Businesses / merchants	Collections, reconciliation, APIs, roles	Business Wallet, Payments, API, Billing
Institutions	High-volume rails and compliance	Chain, P2P, Escrow, Corporate, RSK
Real estate	Marketplace + trusted settlement	Reeskova (+ Escrow / Chain)
Developers	Build on the network	Docs, APIs, testnet, GitHub
Investors / token	Exposure to the ecosystem and RSK utility	REESK / wRSK, group equity narrative

One chain, four clear entry points: Individuals · Businesses · Institutions · Developers. Each path links to concrete capabilities without diluting the corporate brand.

17 Value proposition for investors

Why RSC Group is a multi-product thesis

- Internal diversification — real estate + fintech + infra + markets, not a single wallet KPI.
- Shared infrastructure — lower marginal cost to launch the next product on Chain/APIs.
- Consumer → enterprise funnel — mining/wallet drive adoption; Corporate/P2P monetize B2B.
- Aligned token utility — RSK connects fees, staking, and participation with real platform use.
- Institutional brand — navy, compliance narrative, premium Reeskova vertical (not pure hype).
- Open platform — developers and partners expand the ecosystem without the core team building everything.

Recommended diligence angles

Area	Key questions
Product	Which modules are in production vs. roadmap? Active users / TVL / P2P volume metrics.
Technology	Contract audits, real consensus/TPS status, BSC dependency vs. native chain.
Tokenomics	Supply, vesting, real fee utility, rewards/mining inflation.
Legal / compliance	Jurisdiction, KYC/AML in P2P, legal nature of wRSK/sale.
Go-to-market	Channels (Play Store, social @Reeskap), Reeskova partnerships, Corporate pipeline.
Team & ops	Mission Control, treasury, support, delivery capacity for the 2026+ roadmap.

This briefing facilitates the initial conversation. A full data room (metrics, contracts, audits, cap table) should be requested from the RSC Group team in the formal investment or partnership process.

18 Value proposition for companies

Companies can enter the ecosystem through the path that best fits their operations:

Path	Ideal for	How to start
Digital collections	Retail, food, e-commerce	Business Wallet + QR Payments
API integration	Platforms and fintechs	Payments API / SDKs
Settlement / P2P	Brokers, funds, desks	P2P market + Escrow
Real estate tech	Agencies, developers, proptech	Reeskova (+ escrow-ready)
Private infra	Banks, regulated corporates	RSC Corporate / dedicated networks
Build on chain	Product / Web3 teams	Docs, testnet, APIs

Operational benefits

- Same infrastructure for end customers and back-office.
- Clear payment states (pending/confirmed) for reconciliation.
- Roles and limits for internal control.
- Path from QR pilot to API integration and, if applicable, to a private network.
- Enterprise support and account management in the Corporate tier.

19 Roadmap and trajectory

Timeline communicated in the product narrative (illustrative 2026+ sequence):

Phase	Focus
Reeskova	Flagship real-estate product — marketplace and premium brand
Wallet	Mature non-custodial consumer gateway
Escrow	Trust rails for high-value deals
P2P	Market and liquidity between counterparties
Chain	Infrastructure consolidation and network metrics
AI	Matching, automation, and intelligent cross-product security
Global expansion	Cities, languages, institutional partnerships

Platform vision (beyond the wallet)

- Wallet ↔ Rewards / Mining / Events — continuous engagement.
- Wallet ↔ Bridge (roadmap) — interoperability with other networks.
- Wallet ↔ RSC Bank / Payments (vision) — crypto-first banking experience.

20 **Contact and next steps**

If you represent a fund, family office, company, or institution interested in the RSC Group ecosystem, recommended next steps are:

- Review this overview with your technical and investment teams.
- Request a product demo (Wallet / Reeskova / Business / P2P based on interest).
- Ask for a data room: metrics, detailed tokenomics, contracts, legal.
- Schedule a meeting with the Corporate / Partnerships team.
- For builders: open the documentation and testnet.

A

Appendix — Quick glossary

Term	Short definition
RSC Group	Parent technology company of the ecosystem
Reeskova	Group digital real-estate marketplace
RSC Chain	Blockchain / settlement infrastructure
REESK / RSK	Native utility token of the ecosystem
wRSK	BSC representation / sale linked to REESK
Non-custodial	The user controls private keys
Escrow	Conditional custody until conditions are met
P2P	Peer-to-peer exchange between counterparties
Staking	Locking tokens for network security and rewards
Mining (platform)	Participation/rewards via ecosystem app/web
QR Payments	QR-code payments on RSC Chain
Business Wallet	Multi-user wallet with roles for companies
RSC Corporate	Enterprise services, private networks, support
Finality	Point at which a tx is considered irreversible
TPS	Transactions per second (network capacity)
KYC / AML	Know Your Customer / Anti-Money Laundering
Seed phrase	Wallet recovery phrase

End of document — RSC Group Overview for Investors and Companies (EN)

“One company. Multiple platforms. Shared infrastructure.”
